

Interprofil.

Design: Markus Hartmann

pax

The chair can be adjusted for sitting, relaxing and reclining positions. Thanks to the cleverly positioned pivot, simply leaning back and releasing the footrest fixed below the seat by means of a magnetic catch allows you to get into a comfortable relaxing position all by yourself. The practical, comfortable footrest swings out to the front under the armchair automatically, raising the legs while preventing the back from becoming inclined to such an extreme that encourages falling asleep. This allows you to read, watch TV or simply daydream comfortably. If you want to take a quick nap though, simply lean back a little more for a state of total relaxation. The chair automatically assumes the lying position.
